

## Indiana Certified Emission Repair Facility List

Anyone may perform repairs on a vehicle that has failed the emissions test. However, a minimum expenditure waiver cannot be issued for a 1981 through 1995 model year vehicle unless the repair work was done at an Indiana Certified Emission Repair Facility. The person performing the repairs must complete the Repair Data Form located on the back of the test form. Repair facilities must include their federal id number. Failure to complete and sign the Repair Data Form may result in the vehicle being refused a retest.

Minimum expenditure waivers are available for 1976 through 1995 model year vehicles. A vehicle may receive only one (1) waiver in its lifetime. A 30-day plate is available for failing or OBDII rejected vehicles that meet the Bureau of Motor Vehicles requirements. (Only one 30-day tag can be issued in a 12-month period.)

For 1976 through 1980 vehicles to obtain a minimum expenditure waiver, \$75 must be spent on appropriate emissions related repairs. Repairs **DO NOT** have to be performed by an Indiana Certified Emission Repair Facility.

For 1981 through 1995 vehicles to obtain a minimum expenditure waiver, \$200 must be spent on appropriate emissions related repairs. Repairs **MUST** be performed by an Indiana Certified Emission Repair Facility.

1996 and newer vehicles that received an On-Board Diagnostic (OBDII) test are **NOT** eligible for a minimum expenditure waiver **regardless** of dollar amount spent.

Be prepared to ask these questions before selecting a repair shop:

Does the shop have an Indiana Certified Emissions Repair Technician on staff? What is the technician's name? Will that technician be working on my vehicle?

- What is the charge to diagnose my vehicle?
- What tests does the diagnostic include?
- If my vehicle fails the retest, will the shop stand behind the repairs made without any additional cost?
- Will the shop take my vehicle back to the emission station for a retest? If yes, is there an extra fee for this service?

The Clean Air Car Check equipment and testing procedures for 1981 through 1995 vehicles are not the same as the procedures used at most repair facilities. Because of the equipment differences, it is recommended that the focus be on the percentage of change the vehicle shows after repairs are made. Ask the repair technician what repairs will make the most significant change to the vehicle's emissions.

Also, if you're thinking about buying a used vehicle, call our hotline before you purchase to find out if the vehicle has passed, failed, or received a one-time waiver in our program. The hotline will need the vehicle identification number (VIN) to look up a test record.

Below and on the back of this sheet is a list of Indiana Certified Repair Shops employing Indiana Certified Emission Repair Technicians. This list is current as of December 12, 2002 and is updated regularly. Please check with the Clean Air Car Check Hotline at 1-888-240-1684 for the most current information.
